Frequently Asked Questions 10

Introduction

Book Track is a market intelligence dashboard that helps you track and analyze book listings from multiple online marketplaces. You can filter, sort, and mark books as **interested**, **not interested**, or **contacted**. The dashboard provides real-time statistics and detailed views of available books.

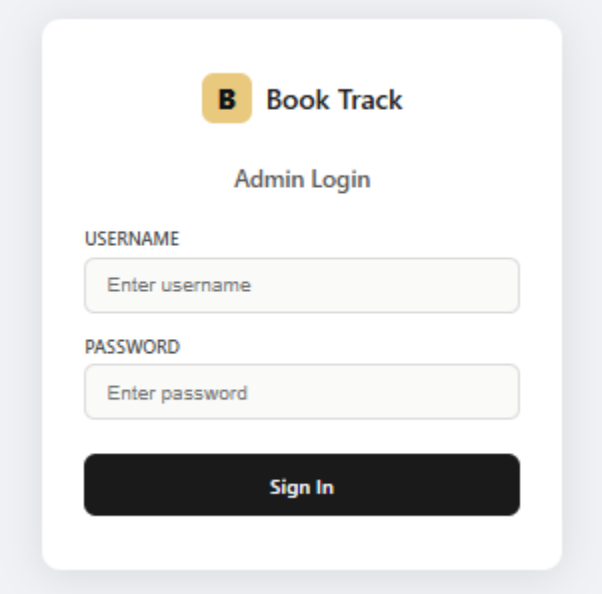
Getting Started

Logging In

1. Open your browser and navigate to your Book Track URL

   (e.g., https://booktrack.up.railway.app/login/).

2. You will see the login screen.



Login Page

3. Enter your **username** and **password** (provided by your administrator).

4. Click **Sign In**.

If the credentials are correct, you will be redirected to the main dashboard.

Logging Out

- Click the **logout icon** (door with arrow) in the top-right corner of the mobile top bar, or in the sidebar footer.

- Confirm the logout when prompted.

Dashboard Overview

The dashboard consists of three main areas:

- **Sidebar** – navigation and quick actions.
- **Top Bar** – page title, live status, and current date.
- **Main Content** – statistics, filters, and results.

Sidebar Navigation

- **Dashboard** – main view with filters and results.
- **Books** – placeholder for future book explorer.
- **Analytics** – detailed market insights and breakdowns.
- **Quick Actions** – a shortcut to show only interested books.

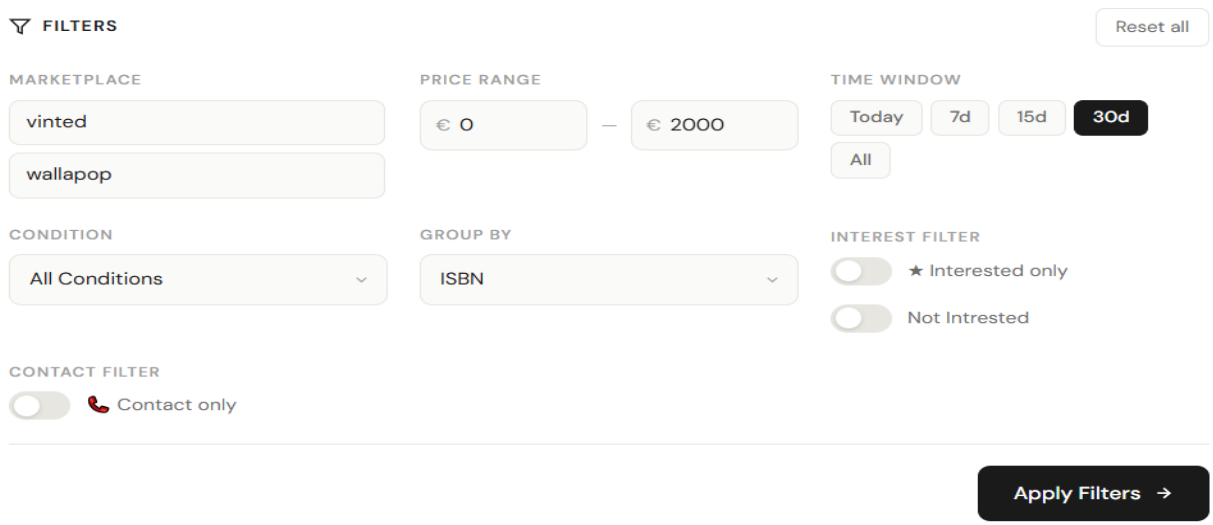
Click any navigation item to switch panels. The sidebar can be hidden on mobile by tapping the **hamburger icon** (☰) in the top bar.

Top Bar

- **Page Title** – changes based on the active panel.
- **Live badge** – indicates real-time data.

Using Filters

Filters allow you to narrow down the displayed books. All filters are located in the **Filter Panel** on the Dashboard.



Filters Panel

Marketplace Filter

1. Click a marketplace name (e.g., wallapop) to expand its variants.
2. Check the boxes for the specific sources you want to include.
3. The filter updates automatically; you can also click **Apply Filters** later.

Price Range

- Enter a **minimum** and **maximum** price in euros (whole numbers only).
- If you enter a negative value, it will be reset to 0.
- If the minimum is greater than or equal to the maximum, an alert appears and the other field is automatically adjusted to maintain a valid range.

Time Window

Select how far back to look for books:

- **Today** – only books 'First Scraped At' today.

- **7d** – last 7 days.
- **15d** – last 15 days.
- **30d** – last 30 days (default).
- **All** – all books regardless of date.

Click a button to activate it; the filter applies immediately.

Condition

Choose a book condition (e.g., New, Like New, Good).
The list is populated based on the current marketplace and price filters.
Select All Conditions to remove this filter.

Group By

Choose how results are grouped:

- **ISBN** – books with the same ISBN are grouped together.
- **Seller** – books from the same seller are grouped together.

Changing this will reload the results.

Interest Filters

Two checkboxes help you focus on specific interest states:

- ★ **Interested only** – shows only books you have marked as interested. When this is on, the "Not interested" filter is automatically disabled.
- ☆ **Not Interested**– shows only books you have marked as not interested. When this is on, the "Interested" filter is automatically disabled.

These two filters are mutually exclusive – you cannot use both at the same time.

Contact Filter

- 📞 **Contact only** – shows only books where you have marked the contact flag as true.

Applying Filters

- After adjusting any filter, click the **Apply Filters** button (or wait a moment for automatic updates on some filters).
- The results section will show a spinner while loading.

Resetting Filters

Click **Reset all** to clear all filters and return to the default view.

Understanding Statistics

The statistics cards at the top of the Dashboard provide a quick overview:

Table 1

Icon	Statistic	Description
	Total Books	Total number of books (including both available and sold).
	Unique Sellers	Number of distinct sellers.
€	Average Price	Average price of available books.
	Rotation Rate	Percentage of books that have been sold (sold / total).
	Hot Books	Number of books currently available.
	Sold Books	Number of books that have been sold.

Exploring Results

Grouped Results

Books are displayed in collapsible groups based on your **Group By** selection.
Each group header shows:

- Group name (ISBN or Seller)
- Number of available books
- Number of sold books
- Average rotation percentage

Below the header, you'll see aggregated price information (average, min, max) for the group.

Expanding/Collapsing Groups

- Click the group header to expand and view the individual book listings.
- Click again to collapse.

- Expanded groups stay open when you re-apply filters or re-load the page.

Book Cards

Each book is displayed as a row with the following elements:

Book Card

Star Button (Interested)

- ☆ (gray) – book is **pending/Neutral** (not yet marked as interested).
- ★ (black) – book is marked as **interested**.

Click the star to toggle between pending and interested.
When you mark a book as interested, any existing “Not Interested” state is automatically cleared.

Not Interested Button

- **Not Interested** (gray border) – book is pending or interested.
- **Not Interested** (red border, bold) – book is marked as **not interested**.

Click the button to toggle between not interested and pending/neutral.
When you mark a book as not interested, any existing “Interested” state is automatically cleared.

Contact Button

- ✆ (gray) – not contacted.
- 📞 (red) – contacted.

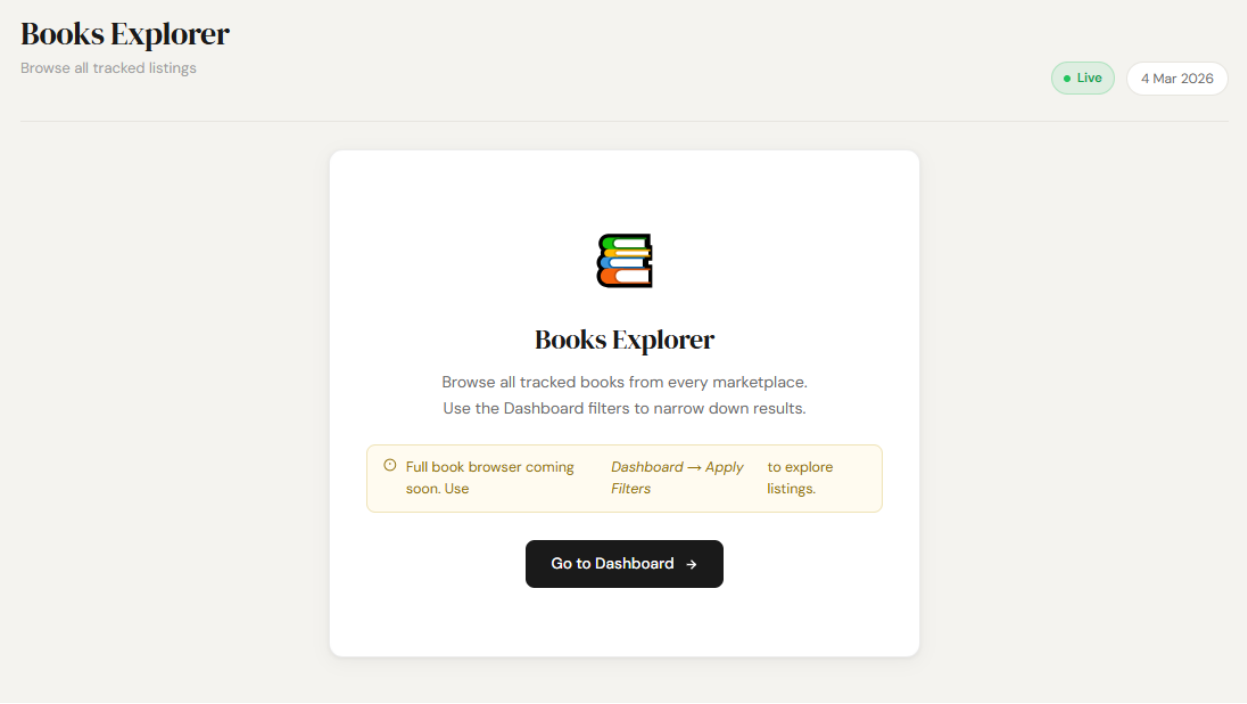
Click to toggle the contact status. This flag is independent of interest state.

All buttons update immediately (optimistic UI) and send a request to the server to persist the change. If the request fails, the button reverts to its previous state.

Additional Panels

Books Explorer

The **Books** panel is a placeholder for a future full-fledged book browser. Currently, it provides a brief description and a button to return to the Dashboard.



Books Explorer

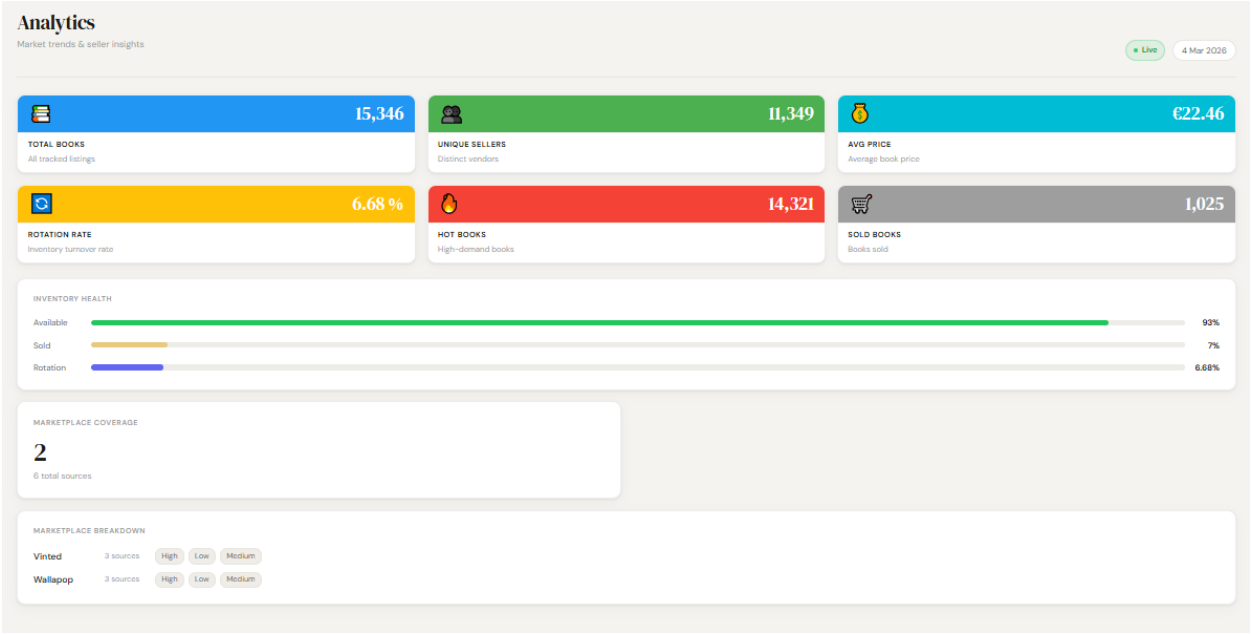
Analytics

The **Analytics** panel shows deeper insights:

- **Summary cards** – same six statistics as the Dashboard.
- **Inventory Health** – visual bars showing percentage of available, sold, and rotation.

- **Marketplace Coverage** – total number of marketplaces and sources.
- **Marketplace Breakdown** – list of each marketplace with its variants.

Data is loaded when you open the panel for the first time.



Analytics

Frequently Asked Questions

Q: Why don't I see any results?
A: Try expanding the time window to "All" or clearing some/all filters. If the problem persists, check your internet connection or contact your administrator.

Q: How do I know if my action (star, not interested, contact) was saved?
A: The button changes immediately. If the server update fails, the button reverts to its previous state. You can also reload the page – your changes should persist if they were saved.

Q: Can I use both "Interested only" and "Not Interested" at the same time?
A: No, they are mutually exclusive. Selecting one automatically unchecks the other.

Q: What does the rotation rate mean?
A: It is the percentage of books that have been sold out of the total books. A high rotation indicates fast-selling items.

Q: How do I report a bug or request a feature?
A: Please contact your system administrator or the development team.
